

AP Environmental Science

Summer Assignment

Thank you for taking AP Environmental Science (APES). I am thrilled to spend the next year learning about the environment and how we affect it. This document will guide you through your summer assignment. This is an ungraded opportunity to engage with the environment and reflect on its importance. So here it is.

Step 1:

Go Outside. Please spend some time outside. This can be in a place that is really special to you, a new place you've never been to before, or simply the neighborhood you live in.

Step 2:

Think about your relationship with the environment. What value do you place in the environment? What do you use and how do you use it? What do you gain from ecosystems? How do you affect ecosystems (positively and negatively)? What is most important to you?

Step 3:

Show up in September ready to learn and push yourself.

If you have any questions please contact me before June 14th in room N249 at North Central High School or by email at brianco@spokaneschools.org.
